**MESSAGE**

The Philippines has just taken a giant leap towards real and lasting change. We have emerged from a dark period of conflict and violence, and we are now building a new future. This is a moment of great hope and opportunity for all Filipinos. We are committed to the principles of the World Internet of Things Convention (WIOTC) and to the goal of creating a more inclusive and sustainable future for all.

As we embark on this new journey, we also need to invest in new systems that make use of information and communication technologies to spur growth in our economy. New investments in people and innovation will bring forth economic development that is sustainable and consistent with our national strategies, policies, and programs.

May this summit focus on the global dimension of an emerging economic industry that transcends physical borders and expands technical standards, on Internet of Things (IoT) related technologies and systems. With your theme of creating a new economy for an IoT world, I am confident that you will usher in a new era where everything is interconnected so that people can make more informed decisions and create many practical improvements in their lives.

As a preliminary remark issued by the World Chinese Business Alliance and other international organizations, may the World Internet of Things Convention Summit in Beijing be a successful event. I wish everyone a meaningful and engaging gathering.

**ANTONIO GUTERRES**  
Secretary-General  
United Nations

**Congratulatory Message to WIOTC**

On the occasion of the opening of WIOTC CHINA SUMMIT, on behalf of ISO and in my own name, I would like to extend warm congratulations to WIOTC.

The Internet of Things (IoT) has had an enormous impact on our lives, and has the power to change our world as well. IoT covers many fields which apply to all aspects of economy and social life. The future development of IoT needs the joint efforts from all walks of life.

Standards are a crucial factor when IoT is revolutionizing our lives. Hopefully ISO standards could facilitate the development of IoT and jointly create a well-ordered smart world.

With all sincerity, I wish the WIOTC a complete success.

**Zhang Xiang**  
ISO President

**Dear Sir or Madam,**

President Andriusėliūnas would like to thank you for your e-mail of 22 December 2017 and the attached letter of 31 October 2017 in which you invite him to give a speech at the "World IoT Innovation and Application Forum" which will take place on 22 and 23 January 2018 in Beijing or send a speech on video.

Regrettably, President Andriusėliūnas is unable to give a positive response to your invitation and request due to his busy agenda commitments in the weeks ahead and on the day in question.

The President has asked me to convey his best wishes for a successful event.

Yours sincerely,

**Adrian Kaut**

**Congratulatory Message to WIOTC**

On the occasion of the opening of 2018 WIOTC, on behalf of the European Electrical Standardization (CENELEC), I would like to extend warm congratulations.

IoT is one of the key enabling technologies that are rapidly transforming our lives. The extraordinary benefits that IoT technologies bring are exciting and promising, helping bring those benefits to a larger audience by ensuring interoperability while also answering to the needs for security and privacy.

CENELEC is a strong defender and promoter of international standardization represented by the International Electrotechnical Commission (IEC) that enables technical coordination and cooperation on a global scale based on shared principles including transparency, openness, consensus and coherence.

CENELEC highly appreciates the work of WIOTC to bring dialogue, information and experience sharing to facilitate understanding on a global scale.

I wish the 2018 WIOTC a great success.

**Barbara Kna**  
CENELEC President
